

# MQ309A

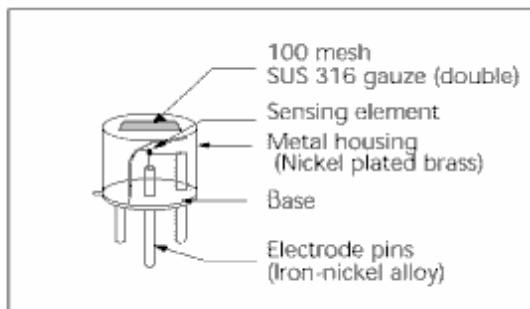

for CARBON MONOXIDE(CO) and Methane Detection

## General Information

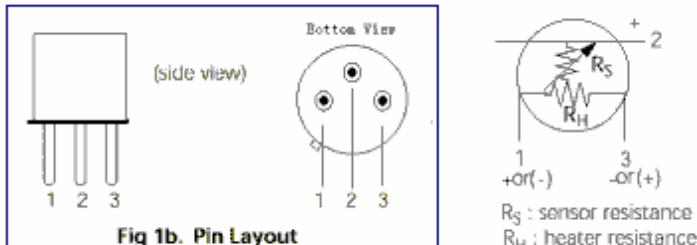

MQ309A is a tin dioxide semiconductor gas sensor which has excellent performance in detecting both CO and Methane. It is miniature sensor adopt changing working temperature periodically to detect with high sensitivity and selectivity, the humidity has little influence on it.

## Configuration

Gas sensor sensitivity material is a mini bead, a heater coil and electrode wire are embedded in the element, this element is installed in the metal housing which uses double stainless steel mesh(100mesh) with anti-explosion function. (As figure1)

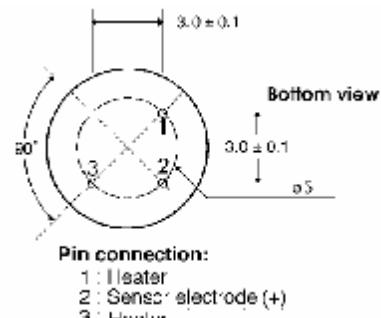

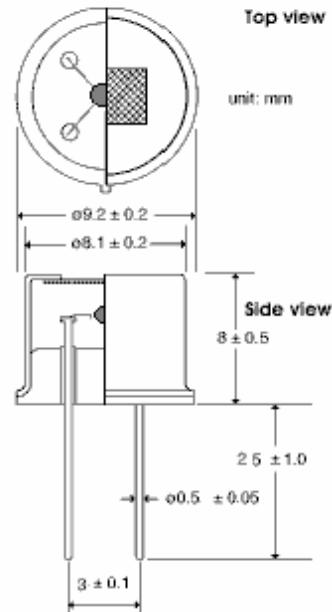

**Fig 1a. Configuration**

**Fig 1c. Equivalent circuit**

## Structure and Dimensions:

## Operating conditions

When the gas sensor is operated with high/low periodic operation (As figure 2), sensor signal changes according to its temperature dependency. By detecting the sensors signal at sufficient timmings (at high temperature for methane and at a low temperature for CO), selective detection of both methane and CO has been achieved. Figs 3 and 3b show the sensitivity characteristics of the MQ309A, at high temperature and at low temperature signals respectively.

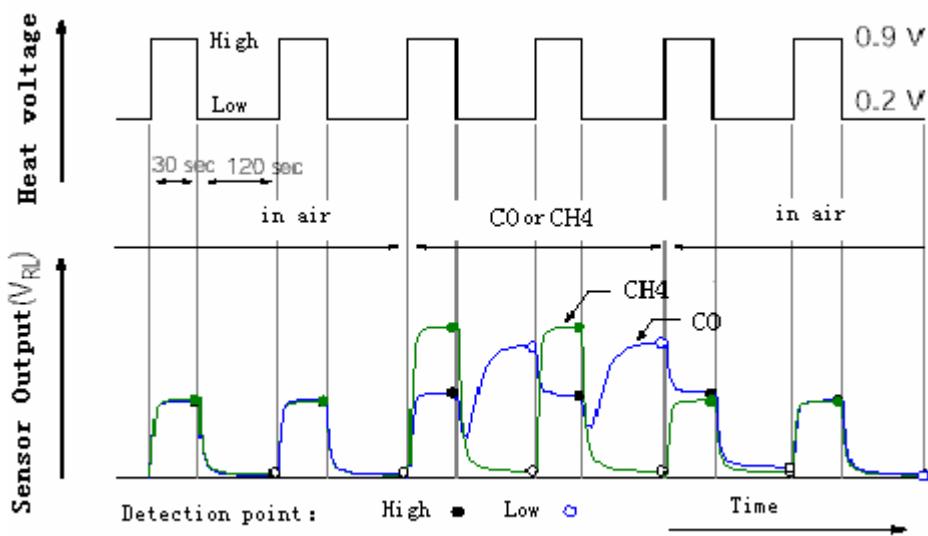

Fig 2 MQ309A Operating conditions and output signal

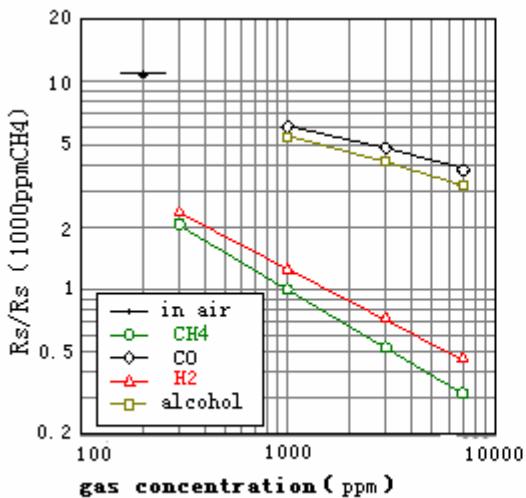

Fig 3 sensitivity at high signal for methane

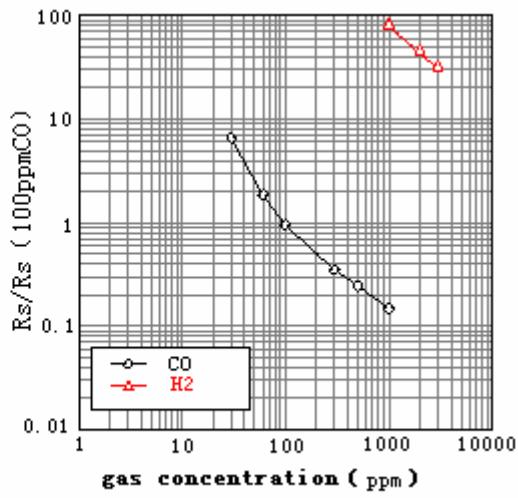

Fig 4 sensitivity at low signal for CO

### A. Standard working conditions

Symbol	Parament	Specifications	Remarks
VH(H)	Heater voltage (high)	$0.9V \pm 0.10V$	AC or DC
VH(L)	Heater voltage (Low)	$0.2 V \pm 5\%$	DC (polarity is important)
V <sub>C</sub>	Circuit Voltage	$\leq 6 V$	
R <sub>L</sub>	Load resistance	Adjustable ( $> 10 K\Omega$ )	P S < 10 mW
R <sub>H</sub>	Heater Resistance	$4.0 \Omega \pm 1.0 \Omega$	At room temperature
TH (H)	Heating time (hihg)	$30sec \pm 5 sec$	
TH (L)	Heating time (low)	$120 sec \pm 10sec$	
DT (L)	Detecting time (low)	$< 1 sec$	Before switching to Low
I (H)	Currentconsumption(high)	$\leq 80mA$	VH=0.9V
I (L)	Current Consumption(low)	$40 \pm 5mW$	VH=0.2V
P <sub>S</sub>	Power siddipation	$\leq 10 mW$	$P_S = (V_C - V_{RL})^2 / R_s$

### B. Environmental Conditions

Symbol	Parameter	Specification	Remarks
--------	-----------	---------------	---------

Tao	Operating Temperature	-20 °C to 50 °C	<b>Recommended range</b>
Tas	Storage temperature	-20 °C to 70 °C	
RH	Relative Humidity	≤ 95% RH	
(O <sub>2</sub> )	Oxygen Concentration	21%±1%(Standard Terms) The sensitivity character are influenced by the variation in OXYGEN concentration	Absolute Minimum Level: more than 18%

**C. Sensitivity**

Mosel	MQ-309		
Symbol	Parament	Specifications	Remarks
R <sub>s</sub>	<b>Sensor resistance at low period</b>	(20kΩ to 200 kΩ)	In 200 ppm CO
α (100-300)	<b>Sensitivity Slope(30-100PPM)</b>	1.05 to 2.1	R <sub>s</sub> (300 ppmCO) / R <sub>s</sub> (100 ppmCO)
α (3000-5000)	<b>Sensitivity slope at Low</b>	0.75 to 1.2	R <sub>s</sub> (5000 ppmCH <sub>4</sub> ) /R <sub>s</sub> (3000ppmCH <sub>4</sub> )

Standard test Conditions : Temperature: 20 °C ± 2 °C      V C : 5.0 V ± 1%  
 Humidity: 65% ± 5%      V H : 0.9 V ± 1%  
 R L : 50K Ω ±5%  
 Preheating time: more than 48 hours
